

IKEUCHI Spray nozzles for the Iron & Steel Industry

17S

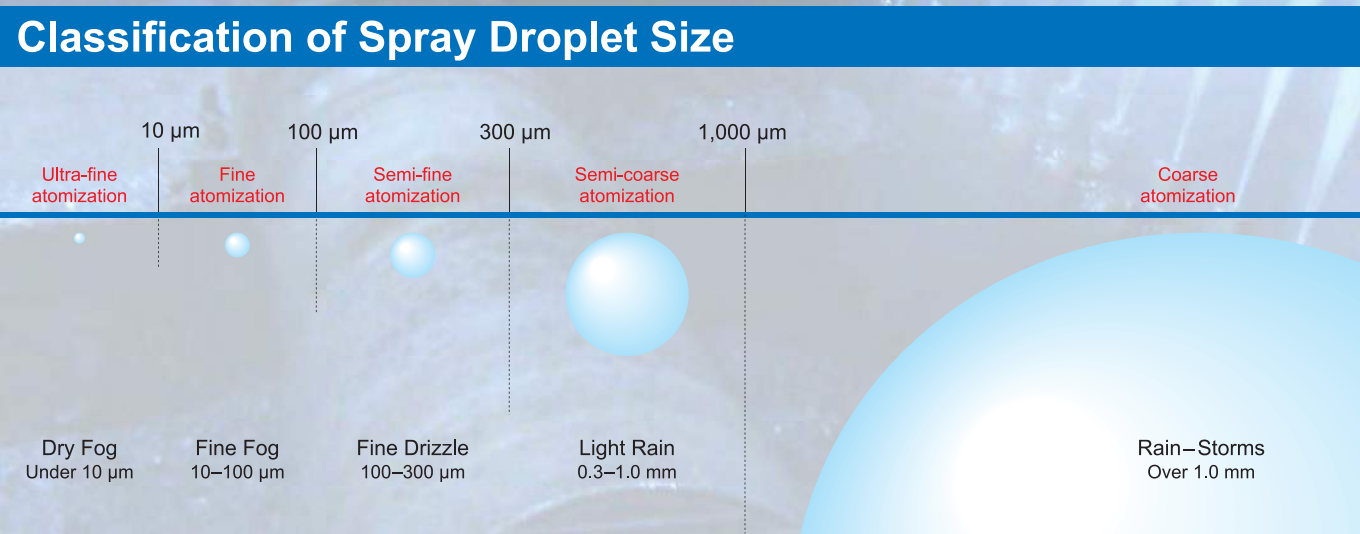

“The Fog Engineers”
H. IKEUCHI & CO., LTD.

High quality spray nozzles supporting the

Steel is an essential product in our lives.
Leading-edge technologies and know-how are required to produce the highest-quality, highest-performance steel products.

IKEUCHI helps steelmakers manufacture uniformly high quality products, create effective and cost-saving production lines, as well as ensure reliable, stable operation.
IKEUCHI has developed spray nozzles and systems for steel cooling, energy-saving descaling, and many other applications.
We will continue our efforts and development to meet all of our customers' needs.

There are many opinions on the classification of spray droplet sizes but IKEUCHI, "The Fog Engineers", have classified them as above and propose optimized fog for specific requirements and work-environment conditions.

Specifications of the products and contents of this catalog are subject to change without prior notice for purpose of product improvement.

IKEUCHI Cooling Technology

IKEUCHI provides high-quality spray nozzles and control systems, CFD simulation analysis, and cooling trial experiments combined with an outstanding performance record for the steel industry.

Cooling effects and conditions

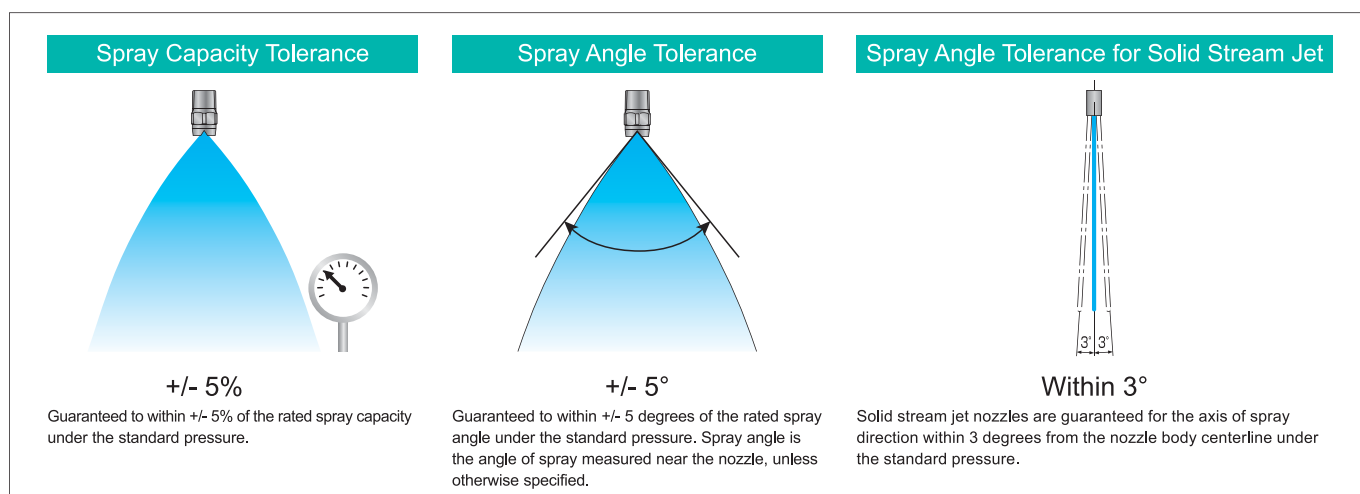

- The effect of spray cooling is dependent on *the fog, the cooling target, the environment and the cooling medium.*
- IKEUCHI measures each aspect of fog spraying performance and uses CFD simulation to create plans for the optimum cooling conditions.

Guarantee of precision nozzle performance

To produce the best cooling effects, all spray nozzles must provide uniform spray performance as designed.

All IKEUCHI's precision-made hydraulic spray nozzles are guaranteed for spray angles and spray capacities. This guarantee covers metal, plastic, and ceramic nozzles.

A standard pressure is defined as the design pressure based on the common liquid pressure during normal use for each hydraulic spray nozzle series. Nozzles are designed to provide the specified spray capacity, spray angle, optimal spray pattern (cross sectional shape of the spray) and spray distribution at each standard pressure. IKEUCHI sets an original inspection standard for the spray pattern, too.

Each pneumatic spray nozzle series also has spray capacity inspection standard at each standard pressure. Only the nozzles that pass the inspection will be shipped.

- Note:
- 1) The figures in this catalog are based on tap water at room temperature and the liquid pressure is measured at the immediate upstream of the nozzle.
 - 2) The above guarantee does not cover air nozzles. Air consumption (blowing air volume) shown in this catalog is for reference only.

Cooling technology

Slab cooling

For cooling of hot slabs, strong impact force is needed to break through the film boiling.

Through cooling trial experiments, we can provide the optimum nozzles and layout.

Thin slab cooling

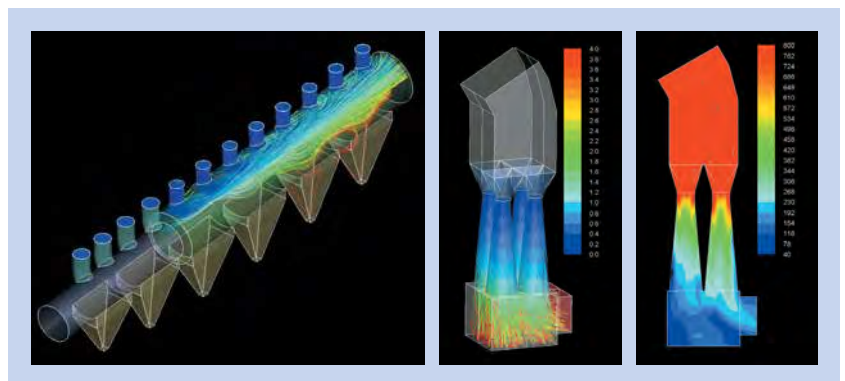

Cooling for surface finishing of steel slabs requires a large amount of fine fog to produce a smooth surface texture. IKEUCHI has been developing low-energy atomizing nozzle units.

Flue gas cooling

Cooling of high temperature flue gas such as sintering exhaust requires spray control and droplet diameters that yield complete evaporation.

IKEUCHI uses CFD simulation when selecting the control system and nozzles that can provide completely evaporating spray.

Gas turbine inlet air cooling

Cooling of outdoor air is effective at countering the drop in power output of gas turbines in summer.

IKEUCHI provides gas turbine inlet air cooling systems that guarantee the cooling temperature.

Fog spray cooling systems

We provide custom systems including the appropriate nozzles, equipment and controls to meet our customers' needs.
By utilizing optimal system control technologies it becomes possible to achieve ideal cooling system performance.

■ Control devices (Valve stand)

■ Control devices (Control panel)

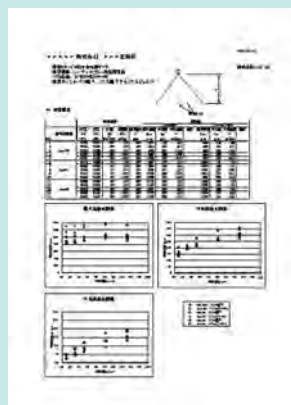

Profile of supporting data

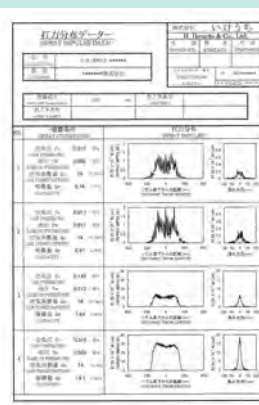

To aid in cooling nozzle selection, IKEUCHI can perform a variety of measurements and simulations.

Thermo-fluid analysis data

Droplet diameter and speed reference charts

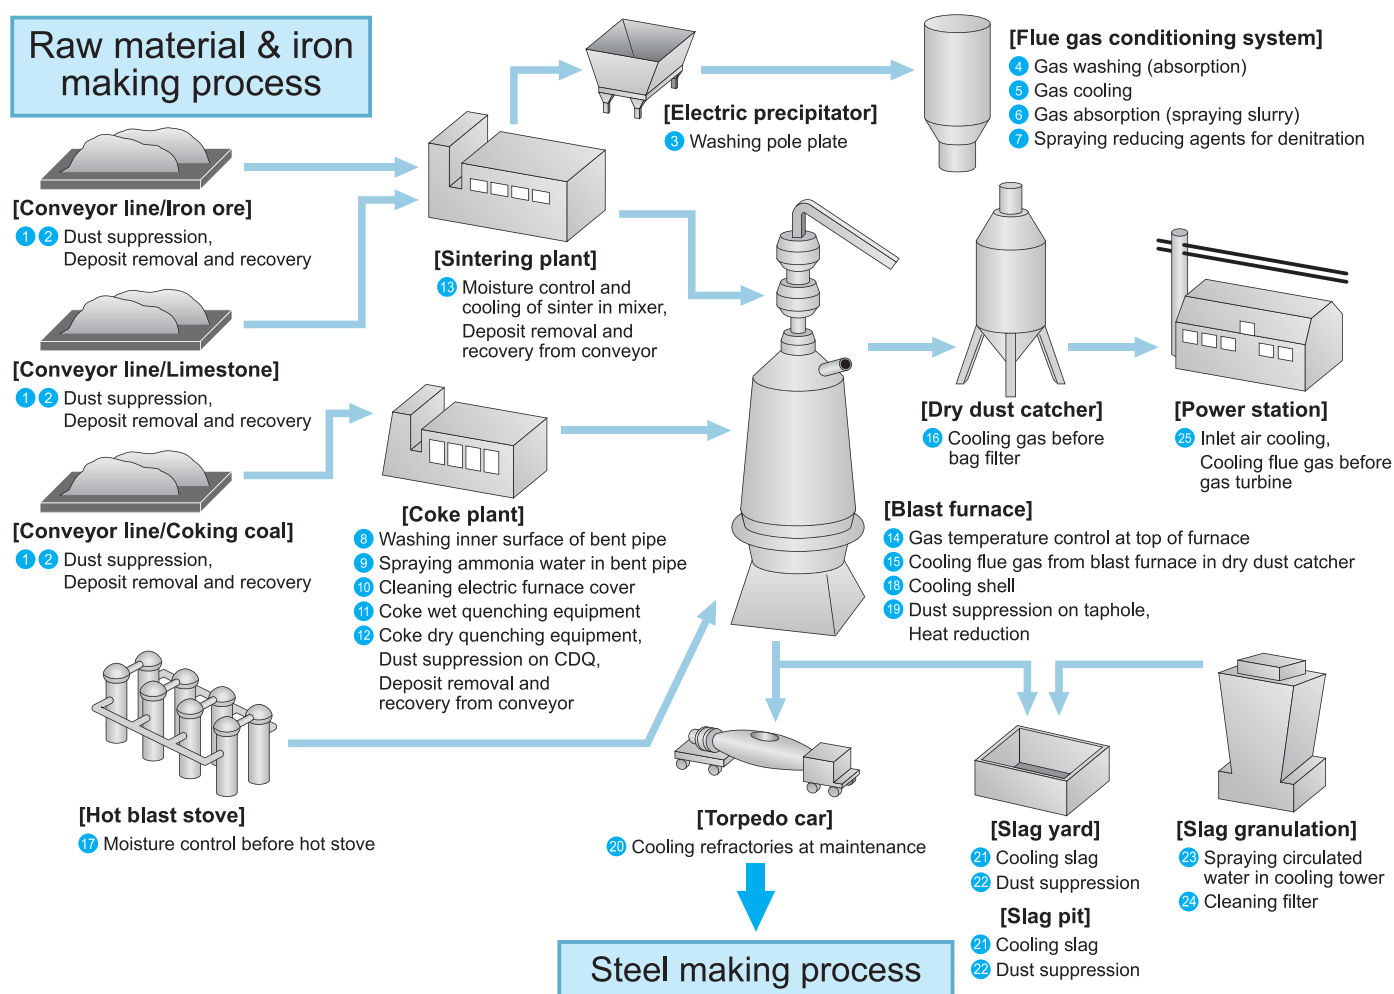

Spray impact distributions across width and thickness (for single unit)

Simulation of flow rate distribution at surface of a beam blank

Nozzle applications for each process

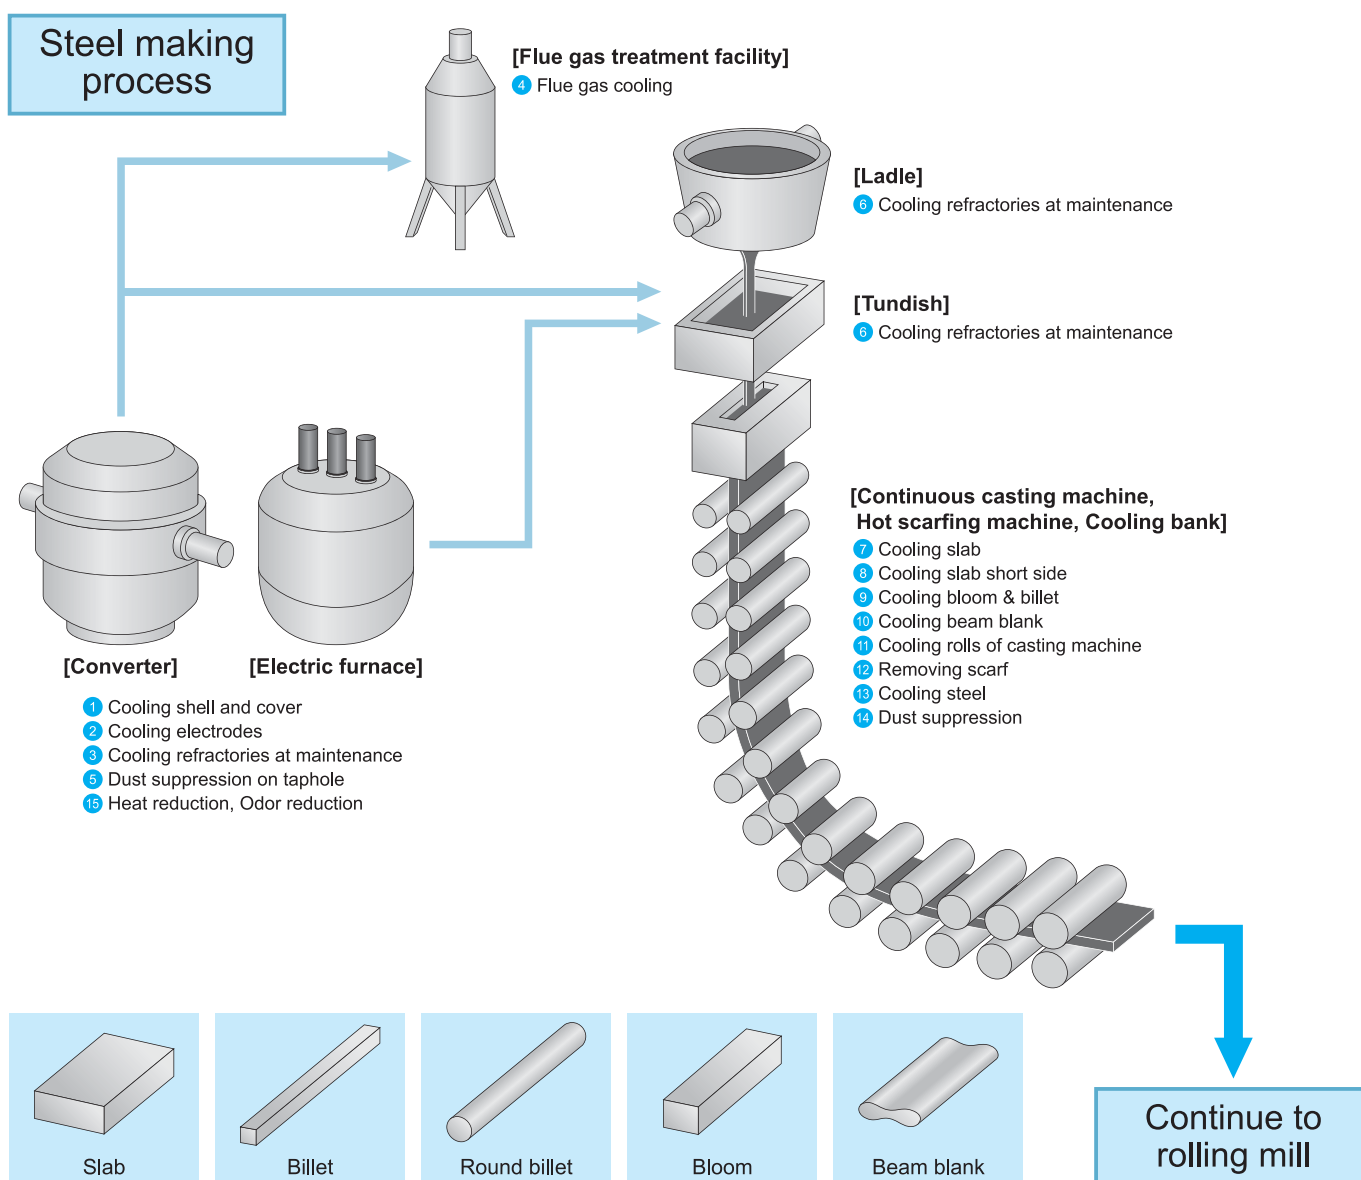

Process	No.	Application	Nozzle series	Nozzle description	Page
Raw material	1	Raw material yard Dust suppression	VVP AJP	• Standard flat spray • Clog-resistant, full cone spray	p.39 p.56
	2	Raw material conveyor line Dust suppression	BIM YYA BAVV CLJ	• Fine fog spray • Wide-angle flat spray • Blower-air driven fine fog spray • Semi-Dry Fog® cooling fan unit	p.24 p.36 p.37 p.76
		Deposit removal and recovery	TAIFUJet®	• Air nozzles (long flat type)	p.67
	3	Electric precipitator Washing pole plate	EJVV AJP	• Air mixing type flat spray • Clog-resistant, full cone spray	p.46 p.56
	4	Flue gas conditioning system Gas washing (absorption)	AJP TJXX	• Clog-resistant, full cone spray • Flange type, full cone spray	p.56 p.62
	5	Gas cooling	SPB	• Variable capacity hollow cone spray	p.64
	6	Gas absorption (spraying slurry)	TWAA TAA TJXX	• Wear-resistant, bidirectional hollow cone spray • Wear-resistant, large flow hollow cone spray • Flange type, full cone spray	p.58 p.58 p.62
	7	Spraying reducing agents for denitration	BIM	• Fine fog spray	p.24
	8	Coke plant Washing inner surface of bent pipe	VV+YY	• Dual flat spray	p.49
	9	Spraying ammonia water in bent pipe	AJP	• Clog-resistant, full cone spray	p.56
	10	Cleaning electric furnace cover	CMP-Sa	• Solid steam jet with wear-resistant sapphire tip	p.66
	11	Coke wet quenching equipment	JJXP	• Standard full cone spray	p.54
	12	• Coke dry quenching equipment • Dust suppression on CDQ Deposit removal and recovery from conveyor	GSIMII TAIFUJet®	• Large capacity fine fog spray • Air nozzles (long flat type)	p.29 p.67
	13	Sintering plant Moisture control and cooling of sinter in mixer Deposit removal and recovery from conveyor	AJP CLJ TAIFUJet®	• Clog-resistant, full cone spray • Semi-Dry Fog® cooling fan unit • Air nozzles (long flat type)	p.56 p.76 p.67

Process	No.	Application	Nozzle series	Nozzle description	Page
Iron making	14	Blast furnace Gas temperature control at top of furnace	VVP JJXP BBXP	• Standard flat spray • Standard full cone spray • Wide-angle full cone spray	p.39 p.54 p.59
	15	Cooling flue gas from blast furnace in dry dust collector	TJXX 4SPB	• 7-head full cone spray • Multiple-head SPB series	p.63 p.64
	16	Dry dust catcher Cooling gas before bag filter	SPB	• Variable capacity hollow cone spray	p.64
	17	Hot blast stove Moisture control before hot stove	SPB	• Variable capacity hollow cone spray	p.64
	18	Blast furnace Cooling shell	AJP	• Clog-resistant, full cone spray	p.56
	19	• Dust suppression on taphole • Heat reduction	GSIMII CLJ	• Large capacity fine fog spray • Semi-Dry Fog® cooling fan unit	p.29 p.76
	20	Torpedo car Cooling refractories at maintenance	BIM Header GSIMII	• BIM integrated spray header • Large capacity fine fog spray	p.27 p.29
	21	Slag yard, Slag pit Cooling slag	KKK	• Variable spray angle & flow, hollow cone spray	p.65
	22	Dust suppression	3OV	• 3-head, off-center flat spray	p.65
	23	Slag granulation Spraying circulated water in cooling tower	TAA TJXX	• Wear-resistant, large flow hollow cone spray • Flange type, full cone spray	p.58 p.62
	24	Cleaning filter	VVP VEP	• Standard flat spray • Even flat spray	p.39 *
	25	Power station • Inlet air cooling • Cooling flue gas before gas turbine	GSIMII KB	• Large capacity fine fog spray • Small capacity fine fog hollow cone spray	p.29 *

Spray Nozzle Materials

In this catalog the materials of nozzles are described using the material codes listed below.

As "The Fog Engineers", we, IKEUCHI, have been developing nozzles in a variety of materials to meet the desires and applications of our customers. We were the first to develop ceramic orifice-inserted spray nozzles and succeed in marketing them throughout the world.

Listed below are the materials of nozzles and parts, and resistance characteristics of each material against common chemicals.

Metals	[Material code.....Material]
	S303.....Stainless steel 303
	S304.....Stainless steel 304
	S316.....Stainless steel 316
	S316L.....Stainless steel 316L
	SCS13.....Die-cast stainless steel equiv. to S304
	SCS14.....Die-cast stainless steel equiv. to S316
	SCS16.....Die-cast stainless steel equiv. to S316L
	S420J2.....Hardened stainless steel 420J2
	B.....Brass (C3604)
	TN.....Titanium
	Tungsten carbide
Rubbers	[Material code.....Material]
	NBR.....Nitrile rubber
	FKM.....Fluororubber
	FEPM.....Tetrafluoroethylene-propylene rubber
	EPDM.....Ethylene-propylene rubber
Ceramics	CERJET® ceramics
	Alumina ceramics (Alumina 92%, etc.)
	[Material code.....Material]
	SiC.....Silicon nitride bonded silicon carbide
	SiSiC.....Sintered reaction-bonded silicon carbide
Plastics	[Material code.....Material]
	PP.....Polypropylene
	PPS.....Polyphenylene sulfide
	PVC.....Polyvinyl chloride
	HTPVC.....Heat-treated polyvinyl chloride
	PTFE.....Polytetrafluoroethylene
	PVDF.....Polyvinylidene fluoride
	ABS.....Acrylonitrile butadiene styrene
	FRPP.....Glass-fiber reinforced polypropylene
	FRP.....Fiber-reinforced plastic
	PE.....Polyethylene
	Ultrahigh molecular weight polyethylene (UHMWPE)
	Araldite®H.....High-temperature epoxy resin (Adhesive)
Others	[Material code.....Material]
	Sa.....Sapphire

Araldite is the registered trademark of Huntsman Advanced Materials.

Note:

- The heat resistance (operating temperature limit) of spray nozzles varies widely depending on the operating conditions, environment, liquid sprayed, etc.
- Ceramic should be used at temperatures under 100°C to avoid a crack caused by heat shock.
- As for the spray nozzles including adhesive, please also take into account the heat/chemical resistance of the adhesive.

○.....Suitable
△.....Possible for short term
×.....Unusable

How to Read the Tables

Descaling nozzles

TDSS series Descaling Nozzles Patented

Rolling Mills Descaling

FEATURES

- Stabilizing strainer for making perfect straight flow.
- Unique nozzle tip design produces razor-like sharp stream.
- Water saving descaling nozzle, achieving higher impact with less water.

B Stabilizing strainer (4 Strainer adaptor 5 Stabilizer 6 Strainer)

MATERIALS

A Nozzle tip

- Standard nozzle tip/Tip with cover
 - Tip: Tungsten carbide
 - Tip body: S303
- Long nose nozzle tip
 - Tip: Tungsten carbide
 - Tip body: S304

③ Packing: Copper

B Stabilizing strainer

- Standard/Long strainer
 - Strainer adaptor: Brass
 - Strainer: Brass or S316L*
 - Stabilizer: S316L
- Strainer with check valve
 - Strainer adaptor: Brass
 - Check valve adaptor: S403
 - Piston valve: S303
 - Spring: S304
 - Strainer: Brass or S316L*
 - Stabilizer: S316L

Technical data and examples of use are shown.

Material description

In our catalogs and drawings, "S" represents "stainless steel", "B" represents "Brass C3604". For the other material codes, please refer to "Spray Nozzle Materials" on page 10.

Types of Strainers	Outer dimensions (mm)

 Threaded adaptor: S303

For details, TDSS descaling nozzles catalog is available.

Uniquely designed descaling nozzle

TDSS series is designed to have no sharp protrusions inside its orifice, which minimizes energy-losses and maximizes the speed and spray impact of water flow, as well as the tip lifespan, even under high-pressure spraying.

Conventional descaling nozzles

Three features of its unique design

Razor-like Thin Stream

TDSS's **razor-like thin stream** has 20% higher impact compared to the conventional nozzles. TDSS is designed to have uniform spray impact on the cross direction.

Thin Stream High Impact

Conventional model

- Depth: 0.5–0.7 mm
- Thickness: 5–6 mm
- Length: 82 mm

TDSS

- Depth: 0.8–1.1 mm
- Thickness: 4–4.5 mm
- Length: 83 mm

TDSS, with **much higher spray impact**, increases erosion depth by 20% compared to conventional model. Minimizing remaining scales improves productivity and quality.

High Impact Water Saving

Even with **10–20% less water**, TDSS provides the same spray impact as the conventional model.

	Conventional model	TDSS
Erosion depth	1.3 mm	1.3 mm
Spray capacity	134 l/min	110 l/min

Water saving effect

Example: Operating 2 hours a day, a TDSS series nozzle achieves

Water savings of 3 tons per day and **1,100 tons** per year.

Offset angle changes descaling effect

● Offset angle

Water sprayed from nozzles often overlaps and weakens the spray impact force at the edges of the spray width. You can prevent the resultant scale remnants by providing a suitable offset angle (5–10 degrees).

● Offset angle 15°

Photo of spray

Photo of erosion test

● Erosion depth: 0.6 to 0.9 mm (Nozzle: TDSS40083)

● Offset angle 5°

Photo of spray

Photo of erosion test

● Erosion depth: 1.0 to 1.3 mm (Nozzle: TDSS32083)

BRASIKan®
series

Manual Brush-cleaning Nozzle Header

Surface finish

- Rinsing and pickling on the surface of steel plates
- Brush roll cleaning
- Cooling steel plate

FEATURES

Design allows brushes to easily remove foreign objects.

By rotating an internal brush, nozzle orifices are cleaned thoroughly.

Foreign objects are flushed away while the internal brushes are rotated.

Liquid inlet

Drain

Brushes are turned by hand.

Mountain-shaped distribution to obtain a uniform spray distribution in multiple-nozzle arrangements.

Easily and effectively flush out foreign objects

By turning the handwheel an internal rotating brush scrubs the nozzle orifices to and discharges the debris. Ideal for applications where nozzle clogging is a concern and maintenance is difficult.

Inner brushes clean the nozzle orifice thoroughly.

Foreign objects inside the pipe are flushed out through the drain.

Even spray distribution

BRASIKan® spray nozzles are designed to produce a mountain-shaped distribution in order to obtain a uniform spray distribution in multiple nozzle arrangements. Thus BRASIKan® is ideal for applications requiring even spray distribution.

■ Measuring conditions: 10 spray nozzles having 65° spray angle and 12 l/min spray capacity (per 1 pc.) at 0.3 MPa measured at spray pressure of 0.3 MPa and spray height of 275 mm, with nozzle spacing 250 mm.

BRASIKan® series

Materials (depend on the liquid sprayed)

Liquid	Nozzle	Header (pipe)	Brush	Gasket
Water	S303	S304	PP / S304	PTFE
Alkaline / special liquids	S316L	S316 / S316L	S316L	PTFE

BRASIKan® series

Air-driven Automatic Brush-cleaning Nozzle Header

Operation mode

■ Spray mode (0° brush position)

■ Nozzle cleaning mode (180° brush position)

FEATURES

- The air-driven type BRASIKan **allows remote control** of spray and cleaning modes.
- Setting nozzle for automatic cleaning is also possible with a timer. Brush position rotates from 0° to 180°, and cleans the nozzle orifices thoroughly.
- Having no manual handle, it can be installed in a narrow, inaccessible place.

Control methods

● Timer control

● Manual control

Hydraulic/Pneumatic (Dual-use) Ultra-Thick Even Flat Spray Nozzles

Turndown ratio range of DDRP+AS series nozzles

Turndown ratio range of normal hydraulic spray nozzles at maximum pressure is limited by pump capacity, and at minimum pressure it is limited by narrower spray angle and unstable spray condition. When the max liquid pressure of water is 0.9 MPa, the turndown ratio of normal hydraulic spray nozzles is 1:4–4.5.

DDRP+AS series can keep stable spray at very low flow due to air pressure. When the maximum liquid pressure is 0.9 MPa, turndown ratio can be extended to 1:20.

Large ↑ Spray capacity ↓ Small	Spray capacity (ℓ/min)	Liquid pressure (MPa)	Air pressure (MPa)	Air consumption (ℓ/min, Normal)	Width	Thickness
	33	0.9	0.1	0		
	19	0.3	0.1	0		
	1.55	0.01	0.1	29		

Turndown ratio range of hydraulic spray nozzle

Turndown ratio range of hydraulic spray nozzles at maximum pressure is limited by pump capacity, and at minimum pressure it is limited by narrower spray angle and unstable spray condition. When the maximum liquid pressure is 0.6 MPa, the turndown ratio of hydraulic nozzle is 1:2.5–3.5.

VVP+AS
series**Hydraulic/Pneumatic (Dual-use) Flat Spray Nozzles**

Patented

Steel making process

- Cooling bloom, slab short side, billet
- Roll cooling

**FEATURES**

Built-in 0.05 MPa check valve.

Can be used as a hydraulic nozzle for high flow rates and as a pneumatic nozzle for better control at low flow rates, which allows optimal control over a wide range of flow rate with minimal air consumption.

Spray capacity turndown ratio is up to 1:20, while minimizing variation in spray angle and distribution.

Normal flat spray pattern with mountain-shaped distribution.

Small Capacity Fine Fog Nozzles

Raw material process

- Dust suppression on raw material conveyor line
- Spraying reducing agents for denitration

Steel making process

- Cooling electrodes of electric furnace
- Roll cooling

Rolling mill process

- Coil cooling

Surface finish

- Minimized spangle treatment of continuous galvanized steel
- Cooling steel plates after coating

Photo of BIMV flat spray

FEATURES

Spray patterns in three types

BIMV Flat spray

[FEATURES]

- Flat spray pneumatic nozzle producing fine atomization with mean droplet diameter of 100 μm or less.*1
- When spraying at a low air-water ratio, BIMV nozzle produces uniform spray distribution. At a high air-water ratio, it produces a mountain-shaped distribution, but a uniform distribution can be achieved by using a multiple nozzle alignment.
- Three spray angles of 45°, 80°, and 110° are available.
- Eight types of adaptors are available.

BIMK Hollow cone spray

[FEATURES]

- Hollow cone spray pneumatic nozzle producing fine atomization with mean droplet diameter of 100 μm or less.*1
- Spray angle is 60°.
- Eight types of adaptors are available.

BIMJ Full cone spray

Patented

[FEATURES]

- Full cone spray pneumatic nozzle producing fine atomization with mean droplet diameter of 100 μm or less.*1
- Two spray angles of 20° and 70° are available.
- Eight types of adaptors are available.

*1) Droplet diameter measured by laser Doppler method

■ Main material of BIM series is S303.

■ Spray angle and spray capacity code

■ Operating pressure: Air pressure = 0.2–0.4 MPa, Liquid pressure = 0.1–0.3 MPa

	Air pressure = 0.4 MPa	25	46	94	190	250

Note: Nozzle description should be indicated as, e.g. "BIMV11002S303+...".
Please see **How to order** on page 26.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

BIM series Small Capacity Fine Fog Nozzles

Types of adaptors and features

Type T

Air inlet is on the center line and liquid inlet is on a 90° angle line to the center line. Suitable for use in a small space.

Type N

Liquid and air enter into adaptor from both sides.

Type NDB

Spray capacity is adjustable with needle valve.

Type SPB

Spray ON/OFF can be regulated by switching the pilot air ON/OFF. The pilot air actuates an internal piston to regulate the spray. (Pilot air pressure more than 0.2 MPa required)

Type SNB

Spray can be regulated by turning compressed air ON/OFF, which actuates an internal piston, to open or close the nozzle. (Compressed air pressure over 0.2 MPa starts the spray.)

Ball joint type adaptor

- Spray direction can be adjusted within +/- 15° by means of a ball joint.
- It is ideal for fine-tuning of spray direction after pipe assemblies have been completed.
- Ball joint types are UNDB, USPB, and USNB adaptors. (e.g., UNDB = NDB-type adaptor including a ball joint)

Air consumption code	Dimensions (mm)								
	L1	L2	L3	L4	L5	L6	a	H1	H2

	15,22	Rc1/8	Rc1/8		172

How to use BIM controlling adaptors

■ SPB adaptor

Spray (ON/OFF) can be regulated by switching the pilot air ON/OFF. The pilot air actuates an internal piston to regulate the spray. The pilot air pressure must be 0.2 MPa or higher. As even low pressure atomizing air can be used, production of a range of fine to coarse fog is possible. Best-suited for when there is concern about scattering droplets.

Connection example

Function chart

Compressed air			ON		
Pilot air	OFF	ON	OFF	ON	OFF
Liquid	Stop	Spray	Stop	Spray	Stop

■ SNB adaptor

Spray (ON/OFF) can be regulated by turning compressed air ON/OFF. Compressed air pressure must be 0.2 MPa or higher in order to start the spray.

Connection example

Function chart

Compressed air	OFF	ON	OFF	ON	OFF
Liquid	Stop	Spray	Stop	Spray	Stop

Optional product

■ Mounting bracket (MBW)

Mounting bracket enables easy fixing of a nozzle on a pole with desired spray direction.

Available in two size for pipe diameters of 8 mm and 10 mm. Available for the adaptor types T, NDB, UNDB, SPB, USPB, SNB, and USNB (not available for N-type adaptor).

How to order

Please inquire or order for a specific nozzle using this coding system.

BIM Header

Integrated Spray Header with BIM Fine Fog Nozzles

Iron making process

- Cooling refractories of hot metal runner

Steel making process

- Cooling ladle and tundish at maintenance

Rolling mill process

- Cold rolled sheets wetting processing

Surface finish

- Minimized spangle treatment of continuous galvanized steel
- Cooling for CGL sheets after alloying furnace
- Fog cooling for EGL sheets

Integrated multiple-nozzle header

FEATURES

Spray header equipped with BIMV nozzles producing fine atomization with mean droplet diameter of 100 μm or less.*1

Uniform spray distribution across the entire spray area.

*1) Droplet diameter measured by laser Doppler method

BIM spray header used for minimized spangle

BIM nozzle, which atomizes surface treatment liquid, can be sprayed on steel plates effectively and uniformly at high speed. Unique design of BIM nozzles minimizes clogging and achieves long-time continuous spray.

Clogging comparison in pneumatic spray nozzles

Test conditions

Pa: Compressed air pressure, Pw: Liquid pressure

★ BIM nozzle:

Pa=0.3 MPa, Pw=0.26 MPa, Spray capacity=15 ℓ/hr

Competitor's nozzle A:

Pa=0.3 MPa, Pw=0.28 MPa, Spray capacity=15 ℓ/hr

Competitor's nozzle B:

Pa=0.3 MPa, Pw=0.22 MPa, Spray capacity=15 ℓ/hr

Used liquid: Excel 601, 10% dilution Continuous spraying

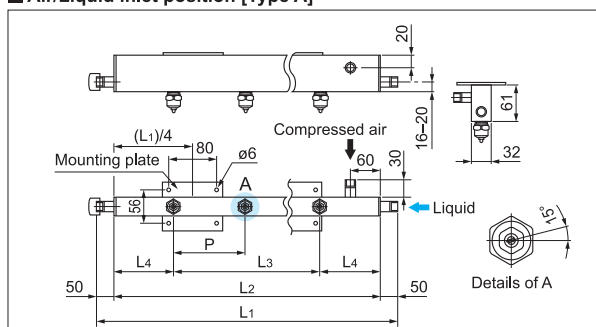

Test results

The figure below shows the change in the spray capacity after spraying for 50 hours.

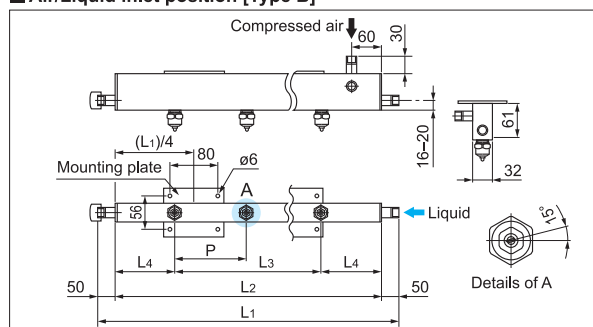

Standard specifications of rectangular spray header with BIM nozzles

Air/Liquid inlet position [Type A]

Air/Liquid inlet position [Type B]

Header code		Nozzle spacing P (mm)	Nozzle Qty. (pcs.)	Spacing (mm)		Pipe connection size						Material	
Header length L2 (mm)	Total length L1 (mm)			L3	L4	BIMV11002		BIMV11004		BIMV110075		Nozzle	Header
1,000	1,100	100	10	900	50	R3/8	R1/4	R3/8	R1/4	R1/2	R3/8	S303	S304
		200	5	800	100					R3/8	R1/4		
2,000	2,100	100	20	1,900	50	R1/2	R3/8	R1/2	R3/8	R3/4	R1/2	S303	S304
		200	10	1,800	100					R1/2	R3/8		

Mounting plate [Type: F, S, or None]

F: To install facing perpendicular from a wall.
S: To install facing parallel along a wall edge.

Specifications of BIMV6006Z nozzle for zero/minimized spangle

Flow-rate diagram

How to read chart

- The above spray capacity shown is for one nozzle.
- Black lines (—) represent liquid pressures P_w in MPa.
- Blue lines (—) represent compressed air pressures P_a in MPa.

Spray distribution

[Spray conditions] Compressed air pressure: 0.4 MPa, Liquid pressure: 0.2 MPa, Spray height: 50 mm

Spray impact distribution

Drawing

- P: Nozzle spacing
L1: Total length
L2: Length of rectangular spray header
L3: Distance between nozzles of both ends
L4: Distance to nozzle from the end of header
 θ : Offset angle (nozzle tip angle to axis of header)

How to order

To determine specifications, please specify a nozzle code, nozzle quantity, nozzle spacing, and header length etc., using this coding system.

(Blank denotes "without plate".)

Note: Inquire with us for integrated spray header for zero/minimized spangle control.

GSIMII series

Large Capacity Fine Fog Nozzles

Iron making process

- Gas cooling before turbine
- Cooling refractories of torpedo car before maintenance
- Dust suppression at casting of pig iron

Steel making process

- Cooling converter shell at maintenance
- Cooling flue gas from electric furnace
- Dust suppression at casting of steel

Rolling/ Surface finish

- Cooling flue gas from heating furnace
- Dust suppression at rolling mill outlet

FEATURES

*1) Droplet diameter measured by laser Doppler method

GSIMII series

MATERIALS

- ① Nozzle tip: S316L
- ② Nozzle core: S316L
- ③ Whirler: S316L equivalent
- ④ Nozzle adaptor: S316L
- ⑤ Outer pipe (for air): S316L
- ⑥ Inner pipe (for liquid): S304
- ⑦ Joint: S304
- ⑧ Liquid socket: S304
- ⑨ Air socket: S304
- ⑩ O-ring: FKM
- ⑪ Packing: Metal wire reinforced AES wool
- ⑫ Flange: SCS13 (S304)
- ⑬ Bolt: S304

Dimensions

Spray angle code	Air consumption code	Pipe connection sizes		Outer diameter (øD)	Free passage diameter (mm)	
		Air	Liquid		Liquid ²	Air
60 20	37	Rc3/8	Rc3/8	30	1.8 (2.2)	1.6
	55				2.2 (2.2)	2.0
	75	Rc1/2	Rc1/2	38	2.6 (3.2)	2.3
	110				3.2 (3.2)	2.9
	150	Rc3/4		50	3.7 (4.0)	3.3
	220				4.0 (4.0)	4.0

*2) Free passage diameter in () shows that of GSIMII with spray angle code of 20.

Type of length

Type	Total length L1 ³ (mm)	Length L2 (mm)
A	560	300–400
B	760	400–600
C	960	600–800
D	1,160	800–1,000

*3) L1: Standard length

Mass

Air consumption code	Length type	Mass (g) ⁴
37, 55	A	1,300
	B	1,600
	C	2,000
	D	2,400
75, 110	A	1,800
	B	2,300
	C	2,800
	D	3,300
150, 220	A	2,500
	B	3,100
	C	3,700
	D	4,300

*4) The mass shown is when the total length is the standard length L1 and excludes a mass of flange.
For longer lengths, add the corresponding mass for each 100 mm of length as below.
(Air consumption code: Mass per 100 mm)
37/55: 180 g, 75/110: 260 g, 150/220: 300 g

GSIMII Flow-rate diagrams (Spray angle 60° type)

- The spray capacity shown is for one nozzle.
- Blue lines represent compressed air pressures P_a in MPa, solid black lines represent liquid pressures P_w in MPa, and dotted lines represent air-water ratio Q_a/Q_w .
- Figures in ovals \bigcirc indicate Sauter mean droplet diameters (μm) measured by laser Doppler method.

Conversion of unit [Pressure] 0.1 MPa \approx 14.50 psi [Flow rate] 1 ℓ (liter) \approx 0.26 US gal.
10 psi \approx 0.07 MPa 1 US gal. \approx 3.79 ℓ (liter)

VVEA Integrated Spray Header

Details of A

- P: Nozzle spacing
- L1: Total length
- L2: Length of rectangular spray header
- L3: Distance between the nozzles of both ends
- L4: Distance to nozzle from the end of header

- Combines two pipes for air and liquid into one rectangular spray header. Compact and easy for installation and maintenance.
- Uniform spray distribution across the entire spray area.

How to order

Wide-angle Flat Spray Pneumatic Spray Nozzles

Raw material process

- Dust suppression on raw material conveyor line

**FEATURES**

Compact, 22mm-long design.

Air → Liquid

Unique 2-step atomization mechanism enables a wide spray angle of 80°. Combines "clog-resistant" and "wide spray angle" features.

YYA series**MATERIAL** S303**MASS** 5 g**YYA Flow-rate diagram****How to read the chart**

- The spray capacity shown is for one nozzle.
- Figures at the foot of each line indicate liquid pressures P_w in MPa.
- Figures in ovals ○ indicate Sauter mean droplet diameters (μm) measured by laser Doppler method.

		0.5	54					180	180	200	210			

*1) Spray angle measured at compressed air pressure of 0.3 MPa and liquid pressure of 0.05 MPa

*2) Spray width measured at 100 mm from nozzle

Note: Spray capacity and spray angle are reduced when viscous liquid is sprayed.

Conversion of unit [Pressure] 0.1 MPa \approx 14.50 psi [Flow rate] 1 ℓ (liter) \approx 0.26 US gal.
10 psi \approx 0.07 MPa 1 US gal. \approx 3.79 ℓ (liter)

How to order

Please inquire or order using this product code.

M5F YYA 8004 S303

BAVV series

Blower-air Driven Flat Spray Fine Fog Nozzles

Raw material process

- Dust suppression on raw material conveyor line

Rolling mill process

- Cooling steel plate

Surface finish

- Cooling steel plate in each process of CGL, CAPL, EGL, and CCL

FEATURES

BAVV series

MATERIALS

- ① **Nozzle:** S303
- ② **Mixing adaptor:** S304
- ③ **Air socket:** S304
- ④ **Liquid socket:** S303

MASS

270 g
(280 g for BAVV6060S303)

Dimensions in () show those of BAVV6060S303.

[Note] Appearance and dimensions may differ slightly depending on materials and nozzle codes.

Spray angle code*	Spray capacity code	Air pressure (MPa)	Spray capacity (ℓ/hr) / Air consumption (ℓ/min, Normal)			Free passage diameter (mm)			Nozzle thread size 1	Pipe conn. size 2	Pipe conn. size 3
			Liquid pressure (MPa)			Spray orifice	Adaptor				
			0.02 Liquid / Air	0.03 Liquid / Air	0.04 Liquid / Air		Liquid	Air		Air	Liquid
60	10	0.02	9.0 / 92	21.0 / 78	31.2 / 76	2.5	1.4	3.0	R1/4	Rc3/8	Rc1/4
	30		27.6 / 168	48.0 / 150	64.8 / 136	3.6	2.0		R1/4		
	60		57.6 / 254	94.2 / 220	123.0 / 190	4.7	2.6		R3/8		

*Spray angle measured at both air and liquid pressure of 0.02 MPa

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi 10 psi ≈ 0.07 MPa [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal. 1 US gal. ≈ 3.79 ℓ (liter)

BAVV Flow-rate diagrams

■ How to read the chart

- The spray capacity shown is for one nozzle.
- Blue lines represent (blower) air pressures P_a in MPa, solid black lines represent liquid pressures P_w in MPa, and dotted lines represent air-water ratio Q_a/Q_w .
- Figures in ovals  indicate Sauter mean droplet diameters (μm) measured by laser Doppler method.

VVP
series

Standard Flat Spray Nozzles

Steel making process

- Cooling of electrodes of electric furnace
- Cooling bloom, billet

Rolling mill process

- Controlled cooling of steel plates
- Cooling of shaped steel
- Surface treatment of rolled sheets (Chemical spraying, rinsing)
- Cooling of plates and rolls in hot strip mills

**FEATURES****VVP series****MATERIALS**

- S303 or B (brass), PP (injection-molded polypropylene)
- S316L equivalent (precision-molded stainless steel)^{*2}
- Strainer for precision-molded stainless steel: S303 or S316

OPTIONAL MATERIAL:

S316, PVC, PVDF, Ultrahigh molecular weight polyethylene, or others

Series	Pipe conn. size	Dimensions (mm)					Mass (g)			
		L ₁	L ₂	H	øD	N	S303	B	S316L equiv.	PP

VVP (Injection molded)	R1/4	27	—	14	—	11.5	—	—	—	2.2

When with a strainer, add 2–5 g to the above mass.

*1) VVP nozzle with spray capacity code of 20 or smaller slightly differs in dimensions (L₁, L₂) and in shape of nozzle tip from the above.

Please contact distributor for details.

*2) Please refer to the chart on page 42 for availability.

[Note] Appearance and dimensions may differ slightly depending on materials and nozzle codes.

**Precision-molded stainless steel**

●: With strainer (Also available without strainer)

 Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
 10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

How to order

Please inquire or order for a specific nozzle using this coding system.

① VVP series

<Example> 1/4M VVP 11515 S303W

1/4M	VVP	115	15	S303	W
Pipe conn. size*		Spray angle code	Spray capacity code	Material	Strainer
1/8M		115	03	S303	W (with strainer)
I		I	I	B	(Blank denotes "without strainer")
1M		15	1500	PP-IN	

② VVP series (Precision-molded stainless steel, small spray capacity)

<Example> 1/4M VVP 6507S316L-IN + WS303

1/4M	VVP	65	07	S316L-IN +	W	S303
Pipe conn. size*		Spray angle code	Spray capacity code		Strainer	Strainer material
1/8M		115	03		W (with strainer)	S303
I		I	04		(Blank denotes "without strainer")	S316
1/4M		65	05			
			07			
			10			

**"M" indicates male thread ("R" of the ISO standard) and "F" indicates female thread ("Rc" of the ISO standard).

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

Uniform spray distribution with multiple VVP nozzle alignment

The standard flat spray nozzle is designed to produce a mountain-shaped distribution in order to obtain uniform spray distribution in multiple nozzle alignment. If some nozzles do not spray as specified, the desired spray distribution in nozzle alignment can not be obtained. This is why IKEUCHI guarantees our precision nozzle performance.

By positioning nozzles with an offset angle of 15° and overlapping at both ends, interference from adjacent sprays is prevented and uniform spray distribution can be maintained.

WVVP series

Thick Flat Spray Nozzles

Rolling mill process

- Roll cooling
- Cooling steel plates

FEATURES

Simple structure, clog-resistant design having large free passage diameter.

High spray impact and large spray area. Tapered spray pattern edges provide uniform cooling effect in multiple-nozzle alignment.

Features thick flat spray pattern with thickness-width ratio of 1:2–4.

WVVP nozzles used in cooling application

● Roll cooling

WVVP achieves uniform and effective cooling.

● Cooling steel plates

WVVP provides a wide and uniform cooling zone.

WVVP series

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

How to order

Please inquire or order for a specific nozzle using this coding system.

<Example> 1/4M WVVEP 90120 S303

1/4M	WVVEP	90	120	S303
Pipe conn. size*		Spray angle code	Spray capacity code	Material
■ 1/4M		■ 90	■ 120	■ S303
■ 3/8M		■ 65	■ 1	■ B
■ 1/2M			■ 600	

*"M" indicates male thread ("R" of the ISO standard) and "F" indicates female thread ("Rc" of the ISO standard).

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

EJVV
series

Air Mixing Type Flat Spray Nozzles

Iron making process

- Washing electric precipitator pole plates

Rolling mill process

- Cooling steel plates

**FEATURES****EJVV used in cooling steel plates**

EJVV series nozzles, with large spray coverage in thickness direction, achieve uniform and effective cooling in the entire spray area.

**MATERIALS** S303 or B (Brass)

OPTIONAL MATERIAL: S316 or others

MASS

S303: 57 g, B: 60 g

[Note] Appearance and dimensions may differ slightly depending on materials and nozzle codes.

EJVV series

①Spray tip ②Cap ③Adaptor

Cautions for use

Spray pressure must be 0.25 MPa or higher to provide stable spray pattern.
Low pressure causes unstable spraying since EJVV series nozzle takes in surrounding air.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

How to order

Please inquire or order for a specific nozzle using this coding system.

DDRP
series

Ultra-Thick Flat Spray Nozzles with Even Distribution

**Steel making/ Rolling mill/
Plate mill**

- Cooling
- Cleaning after pickling

**FEATURES**Large free passage diameter
minimizes clogging.Wide spray coverage with
high spray impact.Thick flat spray pattern with
even distribution.Minimal variation in spray angle,
even in 1:3 spray turndown ratio.

Thickness

DDRP series**MATERIAL** S303**STRUCTURE** Simple one-piece structure to be screwed
into a pipe, no whirler inside.

How to order

Please contact our local sales office for details.

OVVEP
series**Off-center Flat Spray Nozzles with Even Distribution****Rolling mill process**

- Controlled cooling of plates
- Cooling of shaped steel

**FEATURES**

- No need for oblique installation, as the angle is built-in.
- With obliquely-angled flow, OVVEP series prevents accumulation of spray fluid in multiple-nozzle arrangements, resulting in more effective cooling.
- Off-center flat spray pattern with uniform distribution.

How to use OVVEP nozzles**OVVEP series****MATERIALS** S303 or B (Brass)

OPTIONAL MATERIAL: S316 or others

MASS S303: 17 g, B: 18 g

[Note] Appearance and dimensions may differ slightly depending on materials and nozzle codes.

MOMOJet®
series

Self-cleaning Flat Spray Nozzles

Cold rolling mill process

- Cooling steel plate
- Cleaning rolling mill

**Purging****FEATURES****MOMOJet® series****MATERIAL** S303**MASS** 45 g

[Note] Appearance and dimensions may differ slightly depending on materials and nozzle codes.

Spray capacity code	Spray angle (°)		Spray capacity (ℓ/min)							Mean droplet diameter (μm)	Free passage diameter	
	0.3 MPa	0.7 MPa	0.2 MPa	0.3 MPa	0.5 MPa	0.7 MPa	1 MPa	1.5 MPa	2 MPa		Spraying (mm)	Purging (mm)
20	80	86	1.63	2.00	2.58	3.06	3.65	4.47	5.16	300	0.8	3.0
40	80	83	3.27	4.00	5.16	6.11	7.30	8.94	10.3	400	1.2	3.3
60	80	83	4.90	6.00	7.75	9.17	11.0	13.4	15.5	490	1.5	3.5

Cautions for use

- To start spraying a flow rate of about 9 ℓ/min at 0.05 MPa is required for all models because the spray tip opens wide. Select an appropriate pump.
- MOMOJet® is designed to start spraying at the pressure of 0.1 MPa. Use MOMOJet® at 0.2 MPa and greater.
- Since MOMOJet® series nozzles have active spray tips, the spray capacity is only guaranteed within +/-10% and the spray angle within +/-10° under standard pressure.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

How to order

Please inquire or order for a specific nozzle using this coding system.

JJXP
series

Standard Full Cone Spray Nozzles

Iron making process

- Gas temperature control at the top of furnace

Steel making process

- Cooling steel in CCM
- Cooling shell and cover of electric furnace

**FEATURES**

X-shaped whirler provides large free passage diameter, which minimizes clogging.

Spray capacity ranges from small to medium.

Full cone spray pattern with a round impact area and uniform distribution.

JJXP series**MATERIALS**

- Sizes R1/8–R3/8 (Rc3/8): S303
- Sizes Rc1/2–Rc1: S303 or B (brass)
- Sizes Rc1*1/2 or larger: S316
- Whirler material is mainly S316L equivalent, but depending on nozzle codes, S316 equivalent or SCS16 whirlers are used.

OPTIONAL MATERIAL:

S316, S316L,
PP, PTFE (for Rc3/8 sizes and over)

Thread size of optional material may differ depending on materials.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

For spraying slurry, the nozzle material should be wear-resistant.

For this purpose, the JJXP-AL92 series nozzles made of high-purity alumina are available (see page 58).

How to order

Please inquire or order for a specific nozzle using this coding system.

*1) "M" indicates male thread ("R" of the ISO standard) and "F" indicates female thread ("Rc" of the ISO standard).

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

*2) When spray capacity code is 005–030, pipe connection size for R1/4 is indicated as "1/4x1/8M".

*3) See "MATERIALS" information on page 54 for standard materials by each size.

AJP
series**Clog-resistant Vaneless Full Cone Spray Nozzles****Raw material
process**

- Gas absorption in flue gas desulfurization
- Cleaning of precipitator electrodes
- Spraying ammonia water in bent pipe

Steel making process

- Cooling shell and cover of electric furnace

**Rolling mill
process**

- Controlled cooling of reverse side of steel
- Spray cooling in continuous annealing

**FEATURES****Free passage diameter comparison:
AJP series vs. other full cone spray nozzles**

Due to its unique vaneless design (no blockages inside nozzle), AJP series has the largest free passage diameter of all of our full cone spray nozzles. This is why AJP series nozzles are ideal for applications where clogging is a concern such as spraying slurry.

- Conventional full cone spray nozzles
- AJP series nozzles

**AJP series****R1/8**

TJJX series nozzle with larger spray flow and larger flange is available upon request.
For spraying slurry, **TJJX-SiC** series nozzles made of highly wear-resistant SiC (silicon nitride bonded silicon carbide) are available.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

How to order

Please inquire or order for a specific nozzle using this coding system.

7JJXP
series**7-head Full Cone Spray Nozzles****Iron making process**

● Gas cooling

Rolling mill process

● Cleaning inside of tank

**FEATURES**

7 pcs. of JJXP series full cone spray nozzles are screwed into a header.

Mean spray droplet diameter is about half that of other single-head full cone spray nozzles having the same spray capacity.

7JJXP series**MATERIALS** S303 or B (Brass)

OPTIONAL MATERIALS: S316

Pipe conn. size	Dimensions (mm)					Mass (g)	
	L ₁	L ₂	L ₃	W	N	S303	B

[Note] 7JJXP series nozzles are guaranteed only for spray capacity under the standard pressure.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)**Sister product****13JJXP**
series**13-head Full Cone Spray Nozzles**

13 full cone spray nozzles are screwed into a very compact header. Spraying water 360° in all directions.

How to order

Please inquire or order for a specific nozzle using this coding system.

<Example> 3/4F 7JJXP 70 S303

Pipe conn. size*2	7JJXP	Spray capacity code	Material
3/4F		70	S303
1		3150	B
2F			

*2) "M" indicates male thread (R) and "F" indicates female thread (Rc).

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

SPB
series

SPILLBACK Nozzle with Variable Flow

Raw material / pig iron making process

- Gas cooling in flue gas desulfurization
- Gas cooling in blast furnace (dry dust catcher)
- Moisture conditioning of supply air to blast furnace (water spraying to hot blast stove)

FEATURES

Spray capacity can be controlled by opening/closing the return flow valve while supply pressure is kept constant. Featuring minimal variation in spray droplet size with a large turndown ratio of spray capacity (1:10), SPB series nozzles are ideal for gas cooling where the inlet gas temperature and gas flow rate varies.

Fine atomization with no large droplets

The variation in spray droplet sizes is minimized despite the modulation of spray flow rate, SPILLBACK nozzle is suitable for evaporative cooling in cooling towers where the inlet gas temperature varies.

Turndown ratio is 1:10

Spray capacity is maximized by fully closing the return flow valve and minimized by fully opening the return flow valve. The turndown ratio of spray capacity is 1:10.

Use in flue gas cooling tower

SPB nozzles used in air inlets of blast furnace

Affiliated SPILLBACK Nozzles for finer atomization

Sister
products**SPB**
series

4-orifice and multiple-head SPILLBACK Nozzles

Nozzles mounted with multiple single-orifice nozzle tips for excellent atomizing performance at the same spray flow.

4-orifice SPILLBACK Nozzle

The mean droplet diameter is 12% smaller compared to the standard SPB series nozzle.

Please contact our local sales office for details.

**KKK
series**

Hollow Cone Spray Nozzles w/ Variable Spray Angle & Spray Capacity

Iron making process

● Cooling slag

FEATURES

Spray angle and spray capacity can be changed as desired by turning the adjustment cap.

TAIFUJet® series

Air Booster Nozzles

Various process

- Air cooling
- Blowing off drying
- Stripping
- Cleaning
- Blowing off dust
- Air blow transport

FEATURES

Flat type

Noise level is reduced by 10 dB compared to a conventional one-hole air nozzle with the same air volume.

Uniform air flow resulting from the unique design.

TAIFUJet®

The special configuration takes in surrounding air and boosts powerful air flow.

Conventional nozzles

Long flat type

Space-saving design

Long flat type designed for blowing air over greater widths.
Width type, 100 mm–1400 mm, are available.

Round type

Noise level reduced by more than 10 dB compared to a conventional one-hole air nozzle with the same air volume.

High impact solid stream for pinpoint blowing.

Noise level comparison

Cluster header round type

Powerful air flow.

TAIFUJet® Usage examples

Blowing off dust from steel plates

Edge wiper for steel surface treatment (Blowing off liquid)

Blowing off water from shaped steel

SLNH-H/SLNHA-H series

Slit Nozzles (Water/Air Curtain)

Various process

- Water cooling
- Cleaning
- Air blowing

FEATURES

Compact and space-saving design.

Water or air sprayed from slit nozzles is uniform in width direction. SLNH-H series for liquid spraying with even spray flow distribution, SLNHA-H series for air spraying with even spray impact distribution. Thinner liquid film spray saves cost of chemicals and water.

SLNH-H/SLNHA-H series

MATERIAL S304 or PVC

LLYOH
series

Blower LYOHM Header

Surface finish

- Cooling steel plate in each process of CGL, CAPL, EGL, CCL

Equips LYOHM nozzles producing Semi-Dry Fog® with droplet diameters of 10–30 µm

FEATURES

Slow cooling unit. Cooling capacity exceeds cooling by air alone.

High-pressure water (6 MPa)

Blower air

Blower air gives directional flow of the 10–30µm Semi-Dry Fog® while supporting a relatively smooth flow rate distribution.

● Spray capacity and blower air consumption

Liquid pressure (MPa)	Spray capacity (ℓ/min)	Blower air pressure (kPa)	Blower air consumption (m³/min)
6	28.3	0	0
		1	2.4
		3	4.46
		5	5.72
		7	6.69

Performance data of Blower LYOHM header with 27 pcs. of LYOHM nozzles, spray length 700 mm.

How to order

Please contact our local sales office for details.

● Relationship between blower pressure and droplet speed

At distances under 150 mm, droplet speed is roughly proportional to blower pressure.

PSN
series

Pneumatic Slit Nozzles

Pneumatic Slit Nozzles PSN series Spray impact and Spray flow distribution data

Spray conditions

Product: PSN650x0.15

Spray distance: 10 mm

- Air consumption: 2,340 ℓ/min, Normal
- Spray capacity: 15.6 ℓ/min
- Air-water ratio: 150
- Compressed air pressure: 0.27 MPa
- Water pressure: 0.25 MPa

Spray impact distribution

Max.value Min.value Median value

46.14

42.14

43.64

Deviation from median +/-3.4 %

Spray flow distribution

Deviation from median +/-6.1 %

FEATURES

High impact available at short spray distance.

Even spray distribution across the entire width ensures uniform cleaning/cooling without gaps, leaving no spot unwashed/uncooled.

How to order

Please contact our local sales office for details.

UT series Universal Ball Joints

Metal

Photo is UT Ball Joint with a spray nozzle.

FEATURES

- Accurate nozzle alignment is possible after connected to pipe.
- Adjust spray direction over a range of 50° as desired.

⚠ Cautions for use

Maximum pressure:
15 MPa for UT-S303
4 MPa for UT-B (Brass)

Do not use under conditions where sudden change of water pressure occurs.

Plastic

Photo is UT Ball Joint with a spray nozzle.

FEATURES

- Adjustable spray direction while spraying up to 0.3 MPa.
- No O-ring. Easy installation by hand without tools.
- Lightweight, only half of metal joint.
- Low price due to injection molding.

⚠ Cautions for use

Maximum pressure is 1 MPa.
Use at normal temperature.

Do not use under conditions where sudden change of water pressure occurs.

Ball joint code (Inlet x Outlet)	Inlet pipe connection size	Outlet pipe connection size	Dimensions (mm)			Mass (g)	
			L	H ₁ (WAF) ¹⁾	H ₂ (WAF) ¹⁾	S303	B

UT	1/8M Inlet pipe conn. size ²⁾	x	1/8F Outlet pipe conn. size ²⁾	S303 Material
	1/8M 1/4M 3/8M 1/2M 3/4M		1/8F 1/4F 3/8F 1/2F 3/4F	S303 B

UT	1/8M Inlet pipe conn. size ²⁾	x	1/8F Outlet pipe conn. size ²⁾	FRPP-IN
	1/8M 1/4M 3/8M		1/8F 1/4F	

*2) "M" indicates male thread ("R" of the ISO standard) and "F" indicates female thread ("Rc" of the ISO standard).

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

WUT
series

360° Rotatable Universal Joints

Photo is WUT Universal Joint with a spray nozzle.

FEATURES

- 360° rotatable to adjust spray direction.
- Includes the rotating lock to keep the nozzle direction fixed.
- Safe design prevents parts from dropping off when the lock is released.

WUT series

MATERIALS

Adaptor: SCS13
Bolt: S303
E-ring: S304
O-ring: NBR

MASS

146 g

①②Adaptor ③Bolt ④E-ring

Cautions for use

- The bolt may loosen because of vibration if it is screwed in by hand. Tighten with a torque-wrench at 6 N·m.
- Maximum working pressure is 3 MPa.
- When used with a solid stream jet nozzle, slightly turbulent flow occurs.

How to order

Please inquire or order as below.

WUT 1/4M x 1/4F SCS13

ROTARY JETTER
RJ series

Low-pressure Rotating Cleaning Nozzles

Rolling mill process

● Versatile tank cleaning

Use pressure		0.3–0.8 MPa
Spray capacity	Product code	
	RJ3-2-ø7	103 ℓ/min–169 ℓ/min (at 0.3 MPa) (at 0.8 MPa)
	RJ3-2-ø8	127 ℓ/min–207 ℓ/min (at 0.3 MPa) (at 0.8 MPa)
Reach distance		Approx. 10 m in radius
Heat resistance		80C°
Mass		2.7 kg
Material		S304

Buff finishing is possible as an extra-cost option. Please inquire with us.
Four direction spray type is available on request.

FEATURES

Low-pressure type rotating nozzle. Solid stream jet provides high cleaning performance.

As the nozzle part is movable, it is easy to insert into and eject from the tank or equipment.

Compact design enables the nozzle to install in a tank with small inlet.

JET ATTACKER
JA series

Rotating Nozzles for Tank Cleaning

Rolling mill process

● Versatile tank cleaning

3-Dimensional type

Medium-pressure spec.:
JA3-2S (øXX)

Low-pressure spec.:
JA3-2L (øXX)

Medium-pressure spec.:
JA3-4S (øXX)

Nozzle orifice diameter is specified in place of XX.

FEATURES

Simple structure with rotation driven solely by water pressure.

The whole surface of the object can be cleaned uniformly without gaps because of unique gear structure.

CERJet® spray nozzles include ceramic orifices which provide excellent wear-resistance even at high pressure use.

Product code	Number of nozzles equipped	Pipe connection size	Working pressure (MPa)	Spray capacity (ℓ/min)	Allowable temperature (°C)	Main materials	Mass (kg)
JA3-2L (øXX)	2	Rc1/2	0.3–1.2	24–82	4–60	S304, special PTFE, NBR, FKM	1.70
JA3-2S (øXX)	2		1.0–3.0	12–36			1.60
JA3-4S (øXX)	4			24–70			1.95

Nozzle orifice diameter is specified in place of XX.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

2-Dimensional type

FEATURES

■ Cleaning pattern example

By rotating solid stream jet nozzles with high cleaning force, powerful cleaning over a large area is achieved to remove tough dirt.

Product code	Number of nozzles equipped	Pipe connection size	Working pressure (MPa)	Spray capacity (ℓ/min)	Allowable temperature (°C)	Main materials	Mass (kg)
JA2-2 (øXX)	2	Rc1/2	0.3–3.0	14–53	4–60	S304, PTFE, NBR, FKM	1.9
JA2-4 (øXX)	4			28–98			2.0

Nozzle orifice diameter is specified in place of XX.

SR
series

Low-Speed Rotating Cleaning Nozzles

Rolling mill process

● Versatile tank cleaning

FEATURES■ Spray pattern
(360° spray)**Low-Speed Rotation**

Low-speed rotation of 5–10 rpm^{*1} at 0.3 MPa.
Maximized contact time between cleaning object and spray liquid achieves higher cleaning effect.

*1) Reference value

Heat-Resistant

Made of stainless steel 316L with high heat resistance.

Applications

Cleaning for tanks, containers, filling machines, conveyers and various other tanks.

Spray capacity code	Pipe conn. size	Spray capacity (ℓ/min) ^{*2}					Spray pattern	Rotation speed (rpm) ^{*2} (at 0.3 MPa)	Heat resistance
		0.15 MPa	0.3 MPa	0.5 MPa	0.7 MPa	1.0 MPa			
13	Rc1/8	9.19	13.0	16.8	19.9	23.7	Flat spray 360°	5–10	150°C
20	Rc1/4	14.1	20.0	26.0	30.6	36.5			
31	Rc3/8	21.9	31.0	40.0	47.4	56.6			
42	Rc3/8	29.7	42.0	54.2	64.2	76.7			
70	Rc1/2	49.5	70.0	90.4	107	128			
150	Rc3/4	106	150	194	229	274			

*2) Spray capacity and rotation speed are for reference only.

Note: 1) Use of strainer is recommended. Recommended strainer mesh size #200.

2) Install the nozzle downward for stable rotation.

3) If upward nozzle installation is needed, please use our **ES** series nozzles instead.

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

How to order

Please inquire or order for a specific nozzle using this coding system.

*3) "M" indicates male thread (R) and "F" indicates female thread (Rc).

To order, please specify the pipe connection size by replacing respectively "R" and "Rc" by "M" and "F" as in the above chart.

<Example> 1/8F SR 13N S316L (360)

1/8F	SR	13	N S316L (360)

■ 1/8F ■ 1/2F		■ 13 ■ 42	
■ 1/4F ■ 3/4F		■ 20 ■ 70	
■ 3/8F		■ 31 ■ 150	

ES
series

Rotating Cleaning Nozzles for Tanks/Containers

Surface finish

● Cleaning for chemical tanks

Stainless steel type**PTFE type****FEATURES**

Easy maintenance due to low number of parts.

Rotating flat spray or solid stream pattern achieves a complete, uniform cleaning.

[Spray variations]

180° upward spray

180° downward spray

**Stainless steel ES series**

Spray capacity code	Pipe conn. size	Spray capacity at 0.3 MPa (ℓ/min)	Dimensions (mm)	Mass (g)	Spray pattern
01	Rc1/8	7	ø16x38	20	360° 180° upward 180° downward
02		13	ø20x53	35	
03	Rc1/4	20	ø25x65	75	
05		31	ø30x97	155	
1	Rc3/8	42	ø31.5x115	185	
2		70	ø41.5x123	260	
3	Rc3/4	150	ø60x139	605	
4	Rc1	210	ø75x163	925	
5	Rc1*1/2	440	ø88x180	1,640	

Max. allowable temperature for ES series, stainless steel type is 60°C (140°F).

PTFE ES/ESV series

Spray capacity code	Pipe conn. size	Spray capacity at 0.3 MPa (ℓ/min)	Dimensions (mm)	Mass (g)	Spray pattern
30	Rc1/2	30	ø50x65	130	360° 180° upward 180° downward (ESV: Flat spray, 360° only)
40		40			
70	Rc3/4	70	ø57x75	180	
150		150			

Spray capacity code of 110 (110 ℓ/min. at 0.3 MPa) is available in **ESV-PTFE** series.

Max. allowable temperature for ES/ESV-PTFE series is 93°C (199°F).

Conversion of unit [Pressure] 0.1 MPa ≈ 14.50 psi [Flow rate] 1 ℓ (liter) ≈ 0.26 US gal.
10 psi ≈ 0.07 MPa 1 US gal. ≈ 3.79 ℓ (liter)

For details of the rotating nozzles for tank/container cleaning, please ask for each product leaflets.

CLJ
series**COOLJetter® Cooling Fan Unit with Semi-Dry Fog® Nozzles****Improve work environment**

- Environment cooling (heat reduction)
- Spot cooling of heated refractories and steel products
- Dust suppression
- Spraying of deodorizer

**FEATURES**

Energy-economizing unit cools outdoor and semi-enclosed spaces at low cost.

Equipped with LYOHM nozzles spraying 10–30 μm Semi-Dry Fog®.

High-capacity fan allows fog cooling over a wide area of 5–50 m.

Product code (CLJ-)	Dimensions		Mass (kg)	Number of nozzles equipped (pcs.)	Spray capacity (ℓ/hr)	Fan ventilation (m³/min) (50/60 Hz)	Power supply	Main features, accessories
	Fan diameter (mm)	Width x Depth x Height (mm)					Power consumption	
S-E 	ø450	840 x 740 x 1,170–1,280	15 (w/o water)	6	6.4 (at 1.3 MPa)	165/186	100 VAC	<ul style="list-style-type: none"> • No installation work • Low water level sensor • 75-degree oscillation

ARS
series

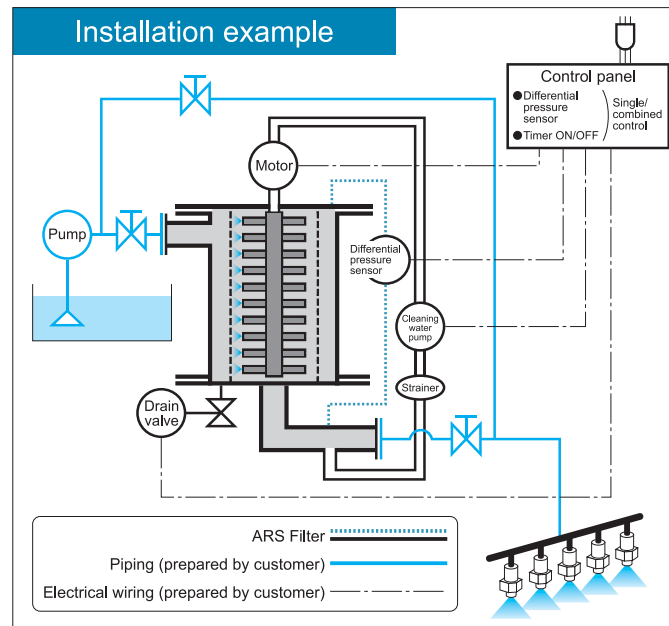

Auto Reverse Self-cleaning Filter

All process

- Recycling of drainage water after cleaning
- Industrial water filtration, cooling water filtration

Installation example

- ARS Filter employs a high-pressure jet spray backwashing method. It ensures stable cleaning, without requiring consumable parts such as cleaning brushes.
- Compact design to install in a small space.
- Detecting the pressure difference caused by an accumulation of foreign particles on the filter, ARS starts jet spray cleaning automatically and discharges foreign particles through the drain.

SPECIFICATIONS

Product code	ARS-150	ARS-500	ARS-1000	ARS-2500
Max. filtration capacity (ℓ/min)	150	500	1,000	2,500
Max. allowable pressure (MPa)	1.0	1.0	1.0	1.0
Power supply, Power consumption	100 VAC, 0.3 kW*	200 VAC (3-phase), 1.7 kW	200 VAC (3-phase), 2.5 kW	200 VAC (3-phase), 3.8 kW

	Outlet	32 A	50 A	80 A
	Drain	25 A	25 A	40 A
Filter screen type	Metal wire	#300, #150, #100, #60, #35	#150, #100, #60, #35	#150, #100, #60, #35
	Wedge wire	—	100 μm, 150 μm, 300 μm, 500 μm	100 μm, 150 μm, 300 μm, 500 μm
Dimensions (Width x Depth x Height) [mm]	360 x 510 x 1,300	433 x 666 x 1,053	560 x 1,000 x 1,223	1,000 x 1,800 x 1,882
Mass (without water) [kg]	67*	115	175	850

*Value for ARS-150 with iron pump.

MATERIALS

Body: Stainless steel (Note: Not all wetted surfaces of cleaning pump and its hoses are stainless steel)

Packing, O-ring: FKM

ARS Filter used in recycling of industrial water for cooling steel plates

Nozzles became clogged due to foreign particles in the industrial water.

After ARS Filter is installed...

Results: Stable production and stable operation

- Liquid: Industrial water
- Foreign particles: Algae, sand, etc.
- Screen mesh size: 100 μm, 300 μm
- Type of screen: Wedge wire

For details, please refer to our ARS Filter catalog and leaflet.
